AN INTRODUCTION

What is microcement?

A thin, hand-applied cement coating that turns almost any surface into one seamless, waterproof, modern finish — no grout, no joints, no demolition. At just 2–3mm it looks like polished concrete, but flows as a single continuous surface.

Why Microcement USA is different

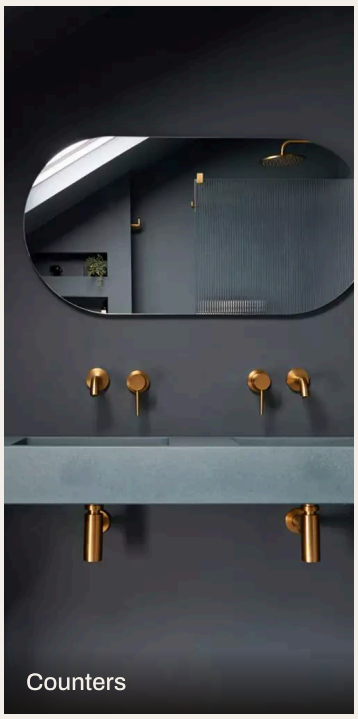

NOT ALL MICROCEMENT IS THE SAME

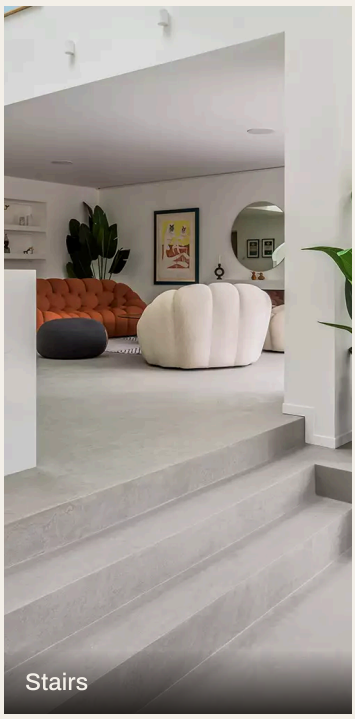

- **Waterproof from the core**
  Sealed all the way through — not just a topcoat that wears off.
- **Reinforced 5-layer system**
  Engineered layers built to outlast ordinary single-coat finishes.
- **Flexible & crack-resistant**
  Moves with the building instead of cracking against it.
- **Certified installation**
  Applied only by trained pros for a consistent, flawless result.

ONE MATERIAL. THE WHOLE HOME.

WHY CLIENTS CHOOSE IT

Looks better. Lives easier.

100% waterproof
Sealed at the core, not just on top.

Stain-resistant
Wine, coffee & oil wipe right off.

Effortless to clean
Soap, water, a soft cloth. Done.

No grout lines
Nothing to scrub or discolor.

Mold & mildew resistant
Healthier showers & wet rooms.

Crack-resistant
Flexes with the building.

Color-stable
Won't yellow, fade or chalk.

Low-maintenance
No yearly resealing marathons.

Adds lasting value
A premium, timeless finish.

The reinforced 5-layer system
