Finished with **Forcrete** microcement

WHAT IS MICROCEMENT

One surface, every room.

Microcement is a thin, hand-applied cement coating that goes **over almost any existing surface** — tile, concrete, drywall, cement board.

No grout lines. No joints. In most cases, no demolition. Just one continuous, modern finish that flows from floor to wall to shower.

2–3mm thin as a credit card

1 seamless surface

MICROCEMENT USA

What Is Microcement?

Your simple guide to the seamless finish — for homeowners, builders & designers.

microcementusa.com

WHERE IT WORKS

One system. Every surface.

Floors

Durable, seamless surfaces for high-traffic spaces.

Bathrooms & Showers

100% waterproof from the trowel — built for wet rooms.

Walls

Joint-free finishes for any interior style.

Counters & Furniture

Custom vanities, counters, and built-ins.

WHY PEOPLE LOVE IT

Beautiful. And built to last.

Waterproof

Forcrete is waterproof at the base coat — not just the sealer.

Flexible & crack-resistant

Moves with the substrate, so it resists cracking.

Truly seamless

No grout, no joints, nowhere for dirt to hide.

Custom finishes

A full palette of colors and textures, smooth or stone-like.

Powered by Forcrete
The advanced microcement system trusted across Europe.

THE REINFORCED SYSTEM

Five layers. One flawless finish.

01 **Primer**

A bonding primer keyed to the substrate.

02 **Reinforced Base Coat**

Base coat with fiberglass mesh embedded for strength and crack resistance.

03 **Build Coats**

Added coats build thickness and lock in waterproofing.

04 **Microcement Finish**

Two thin, hand-troweled coats for color, texture, and the seamless look.

05 **Seal & Protect**

Sealer coats lock it in — durable and easy to clean.
